

## ENCAPSULATED FINISHING TANK FOR THE NEW \*F370\* FDM PRINTERS

The EFT-320 has been developed to be used specifically with the new F370 Series 3D printers with a build size up to 355 x 254 x 355 mm (14 x 10 x 14 ")

Efficiently removing the support material from the print in a cost effective way.

Gemini Cleaning Systems Ltd provide you with the most advanced bespoke innovating cleaning systems incorporating the highest possible safety operational standards & protocols provided by any other manufacturing company in this industry.

The tanks are manufactured in high grade stainless steel. We employ the very latest innovations in insulation materials keeping a more constant regulated temperature inside the tank making it more efficient.

All control circuits are 24v DC with simple to set/operate heat and timer controllers.

The EFT-320 machine comes as standard with semi-automatic fill and a pumped drain cycle (*to use both of these options the machine needs to be connected permanently to the mains water/drains services*).

A standard 13 amp 220-230 v supply is required.

Tank volume : 55 lt

Temperature range: ambient—90 \*C

External size to tank top: H 1060 D 640 W 530 mm

Internal basket: 360 x 360 x 280 mm

Very high flow magnetically driven pump with variable pressure/flow controls.

High & low level tank fluid level sensors within the tank.

Safety switch isolating the machine if the lid is raised.
